FUNDAMENTALS OF PROGRAMMING

Week 2

Converting ints and floats

CONVERTING NUMBERS, FLOAT AND INT

» Sometimes, we need to convert floats to int (*check basic data types from week 1 lectures!*)

» We can use the command round(x) to get x rounded to the closest integer.

```
round(7.49)
7
round(7.5)
8
```

» We can use int(x) to convert float to integer. In this case, the decimal is just left out

```
int(11.4)
11
int(11.99)
11
```
